

THE NAIL THAT THINKS IT'S A SCREW

Nowadays most cladding must be removable, so fixing cladding with nails is really a non-starter... until now.

Clad-Tite® is a fast, efficient, powered method of fixing cladding that is removable without damage to the timber, whether that's a hidden or surface fix.

The 'Reduced D' type head is designed to minimise surface damage to the timber when power fired, while a T10 recess allows for extraction but exhibits far greater pull-out retention than a standard powered nail.

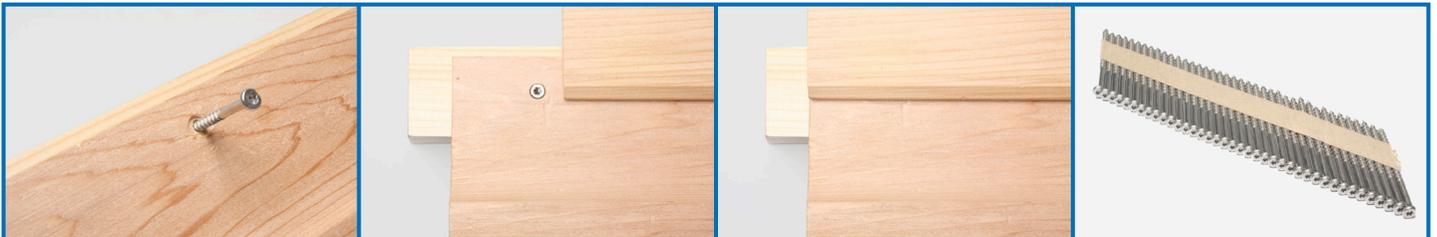

The combination of thread and point reduces timber split, making Clad-Tite® ideal for tongue and groove type applications, by far the most common type of cladding.

Manufactured in stainless steel with a Net-Coat® Clear finish for superb all weather performance, Clad-Tite® is guaranteed to last the life of the cladding. Collated in strips for use in gas and other types of powered angle nail guns.

- Ideal for all types of cladding.
- Removable nail - no damage to timber when taken out.
- Collated - fast & efficient.
- Small head - semi concealed neat flush fix.
- Stainless steel - corrosion resistant, no staining.
- Size - one size fits 99% of cladding.
- Guns - fits most high quality nailer's.
- TDCA approved - accredited by the Timber Decking and Cladding Association.
- Far superior pull out resistance than a nail.
